| Estimated Total = | | |

Winterization Procedure

Inboard / Outboard

- 1) Ensure proper operating condition and flush cooling system.
- 2) Run the engine sufficiently, bringing up to normal operating temperature allowing a portable gas tank filled with a mixture to circulate through the fuel system.
- 3) Drain water from engine block and fill internal water passage with anti-freeze. The anti freeze contains a rust inhibitor.
- 4) Spray lubricant on all external engine parts to prevent against corrosion.
- 5) If the engine is a closed cool water system the anti-freeze will be inspected.

Outdrive

- 1) Remove unit
- 2) Inspect universal bearing, universal joints, bellows, shift shaft bushing, etc.
- 3) Drain and re-fill gear lube, reinstall drain screws and replace gaskets.
- 4) Grease shaft and all zink fittings.
- 5) Reinstall unit

Outboard

- 1) Run engine to ensure proper operating condition and flush cooling system.
- 2) Run the engine sufficiently, bringing up to normal operating temperature allowing a portable gas tank filled with a mixture to circulate through the fuel system.
- 3) Grease all zink fittings.
- 4) Drain and re-fill gear lube, reinstall drain screws and replace gaskets.
- 5) Complete compression test on motor.(Results will filed for future reference)
- 6) Spray lubricant on all external engine parts to prevent against corrosion.

Water Systems

- 1) Drain water from system.
- 2) Run anti-freeze through the system.
- 3) Inspect system for visible leaks.

Please list any additional services you would like performed (An estimate will be provided)
